SUMMARY

Cybersecurity Analyst with hands-on experience in network traffic analysis, packet inspection, and attack simulation within virtual lab environments. Worked with tools including Wireshark, Nmap, Splunk, and Burp Suite to investigate network behaviour, identify anomalies, and analyse security events. Familiar with SOC workflows, including alert triage, incident analysis, and threat detection across DNS, TCP/IP, and HTTP/S traffic.

WORK EXPERIENCE

Cybersecurity Analyst Intern - M Cyber Academy

June 2025 - December 2025

- Analysed 300–500 network packets per session using Wireshark to identify protocol anomalies, latency issues, and suspicious traffic patterns
- Conducted scanning and enumeration across 150+ lab systems using Nmap, identifying exposed services and common misconfigurations
- Investigated DNS, TCP/IP, and HTTP/S communication patterns during simulated attack scenarios and troubleshooting exercises
- Assisted in analysing simulated security events involving brute-force attempts, MITM activity, and reconnaissance behaviour in controlled environments
- Reduced troubleshooting time for lab exercises by documenting recurring network issues and remediation steps for learners

Freelance Network and Security Trainer - Self Employed

August 2025 - Present

- Delivered 20+ instructor-led sessions covering networking, traffic analysis, and security fundamentals across 3+ learner batches
 - Designed hands-on virtual labs involving VLANs, routing, packet analysis, and attack simulation exercises
 - Guided 10+ learners through Wireshark-based packet inspection and troubleshooting exercises involving DNS, TCP handshakes, and HTTPS traffic
 - Improved lab completion consistency by creating structured walkthroughs and troubleshooting documentation for common configuration issues
-

Projects

DDoS Traffic Simulation & Analysis

- Simulated high-volume traffic conditions in a controlled lab to analyse request spikes, connection saturation, and service degradation patterns
- Reviewed packet captures to identify indicators commonly associated with denial-of-service activity during monitoring

Command & Control (C2) Communication Simulation

- Simulated periodic outbound beaconing traffic between controlled systems to study communication intervals and connection patterns
- Analysed traffic captures to identify suspicious outbound connections and uncommon destination behaviour

Ransomware Behaviour Study

- Simulated file encryption activity in an isolated virtual machine to analyse behavioural indicators and system impact
- Observed file access changes, abnormal execution behaviour, and persistence-related activity during execution

Malicious Traffic Analysis (Browser Extension)

- Analysed outbound browser-extension traffic and identified suspicious communication patterns linked to data exfiltration behaviour

Skills

Security Operations

Alert Triage, Incident Analysis, Threat Detection, Log Analysis, SIEM Monitoring, MITRE ATT&CK

Networking

TCP/IP, DNS, DHCP, HTTP/HTTPS, VLANs, Subnetting, Routing Fundamentals, Network Traffic Analysis

Tools

Wireshark, Nmap, Splunk, Burp Suite, Metasploit, Kali Linux, VMware, VirtualBox

Certifications

- **Google – Sound the Alarm: Detection and Response**
- **One Year Diploma in Cyber Security – M Cyber Academy**

Included Certifications

CEH • Linux Administration • Python Essentials • WAPT •

APT • IoT Security • Digital Forensics • Network

Administration

Education

- | | |
|---|------------------------------|
| • Bachelor's of Commerce - Maharshi Dayanand University (Rohtak, Haryana) | July 2023 - Present |
| • High School - H.R Green Fields Sr. Sec. School (Jhajjar, Haryana) | April 2021 - May 2023 |
